Security Scanners

Cutting edge screening
and detection solutions

Postal Cabinet X-ray systems

The Quadient SP-300/500 range of cabinet X-ray systems guarantees you the high definition X-ray images that you need for accurate and confident screening of mail for potential hazards and threats. Postal screening is the first line of defence against postal hazards and Quadient helps deliver security and peace of mind for you and your business.

Quadient X-ray scanners represent a world leading investment in the safety and security of mailroom staff and are trusted to deliver top class X-ray imaging in a safe and robust cabinet.

Quadient systems are designed for ease of use by non-technical staff. Their slim-line design means that the use of expensive office and mailroom space is kept to an absolute minimum. There are two models in the product range. The compact SP-300 can be situated on or under a desktop or used in conjunction with an optional wheeled trolley. The SP-500 is floor standing and is ideal for screening larger parcels and briefcases whilst having a similar footprint to a small filing cabinet.

Quadient X-ray scanners produce clear, definition rich, X-ray images of mail, courier and baggage items to allow operators to quickly and easily distinguish between legitimate and malicious or prohibited items.

Features and Benefits

Rapid Screening

Mail and courier items are simply placed into the X-ray inspection chamber and a single button action produces an almost instant clear image of the contents.

Compact and Easy to use

Quadient X-ray scanners are specifically designed for use by non-technical staff. Their compact design and small footprint means they can be used in even the smallest mailrooms.

High Definition Imaging

To ensure operators can identify powders and IED (Improvised Explosive Device) component parts, the SP-300/500 range auto enhances X-ray images for optimum clarity. Additional standard enhancement features include multi-zoom, colour options for highlighting medium and high density materials and inverse, negative feature for highlighting fine wires.

Safe and Secure

Quadient X-ray scanners use very low level X-rays and conform to International Electrical Safety and Radiation Standards. For your peace of mind and re-assurance, Radiation Safety and Test reports are provided with every system.
