Our range includes:

- ✓ Cabinet X-ray Scanners
- ✓ Conveyor X-ray Scanners
- ✓ Metal Detection Systems
- ✓ Mobile Trace Detection
- ✓ Device Containment
- ✓ Maintenance
- ✓ Safe Disposal
- ✓ Relocation
- ✓ Training (Suspect Package, RPS, Operator Training)

We have your Security process covered

Alongside our market-leading range of security and safety products, we also offer a full suite of services. From threat assessment and management to health and safety compliance, we go the extra mile to ensure our customers always have the support they need.

Cabinet X-ray Scanners

[Cabinet X-ray scanners](#) provide a compact, cost-effective threat detection solution without a conveyor-based X-ray system's space requirements and operating costs. Generous chamber sizes enable fast and efficient processing of bulk mail and individual parcels. Dedicated software and image enhancement tools mean you can be assured of the same high detection level, whichever model you choose.

At Quadiant, we know that resilience in the mailroom is not just about detecting threats. It's also about what happens if you find a threat. The integration between Callmy Emergency Messaging service and our cabinet x-ray scanner range means that, for the first time, a scan can be sent to a dedicated group of first responders of your choice. The Callmy service has quickly become the go-to for resilience, emergency planning, and business continuity leaders.

Conveyor X-ray Scanners

Our [conveyor x-ray scanners](#) and baggage scanning systems have image recognition technology that quickly and easily identifies the material composition of scanned objects and enables (TIP) Threat Image Projection. This virtual image management tool ensures that screening performance is always maximised.

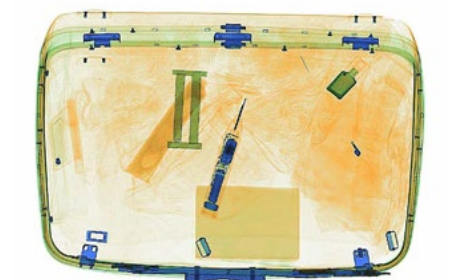

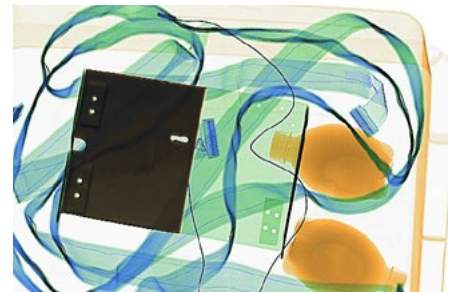

Metal Detection Systems

We offer a range of state-of-the-art [metal detection systems](#) and handheld detectors, from various walk-through detectors for security screening to the innovative TR360 Search Pole, which uses ferromagnetic detection, making it ideal for detecting items containing significant amounts of ferrous materials, such as knives, guns, and mobile phones. We can provide you with the full package when it comes to checkpoint security.

Mobile Trace Detection

With today's heightened threat of terrorism, security professionals at nuclear power plants, embassies, high-risk facilities, transportation, and government agencies are exploring explosive trace detection equipment as part of a robust security strategy to help protect the public and vital infrastructure from threats.

The TR-TRACE can detect and identify various explosives, including pure explosives and composite explosives, under different humidity and pressure conditions in vapour or trace (particles mode).

Device Containment

In the event of an emergency, our Device Containment solutions enable suspect devices to be isolated and contained until they can be dealt with through your official procedures. They can be deployed in various public places, including airports, train stations, sports stadiums, and retail environments, to reduce the risk of explosions.

Maintenance

Regardless of the size of your organisation or the budget available, your security machines must be maintained to a safe and functional standard. We offer a range of maintenance packages to cater to all businesses' requirements, regardless of the make or model of your X-ray scanner.

Safe Disposal

When the time comes to replace or upgrade your machine, you'll need a partner that can carry out Safe Disposal of your equipment and recycle it in such a way as to meet your corporate responsibility and comply with the relevant regulatory, health and safety and environmental considerations. Our disposal team fully complies with the Waste Electrical and Electronic Equipment Regulations (WEEE).

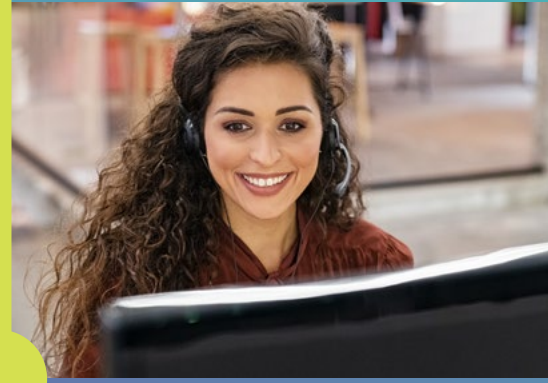

Relocation

We offer a bespoke relocation service for organisations looking to relocate and install their current X-ray scanner at a new location.

Before relocation, our team will gather information to ensure the unit is moved safely and promptly.

Training

With over 70 years of experience in handling X-ray equipment, we are uniquely positioned to provide training courses for staff engaged in X-ray activity. Our programmes cover every aspect of mailroom security, from identifying hazards to operating machinery—both instructor-led and e-learning training packages available, covering operator training, RPS training and suspect package recognition.

WE'VE GOT YOU COVERED

Quadient customer support is there for you with our contact centre and trained technicians who are ready to assist you. We are dedicated to providing you with world class customer satisfaction and offer you automatic diagnostics with our product line.

By uploading systems data, we will be alerted if you are having trouble. This remote access to your system allows us to analyse the situation remotely and then fix it accordingly.
